# **1. Introduction**

## **1.1 Purpose**

*The Nomad Oasis project aims to provide a comprehensive travel guide platform tailored for tourists exploring Pakistan. This document specifies the requirements for the Nomad Oasis software, designed to address the lack of accessible and up-to-date travel information. The scope includes key functionalities such as curated travel itineraries, safety guidelines, travel updates, and a marketplace for travel-related products. This SRS outlines the complete system features and usability goals for the first release of Nomad Oasis.*

## **1.2 Product Scope**

*Nomad Oasis is a travel-focused software application designed to assist tourists and travelers in Pakistan. Its primary purpose is to simplify trip planning by providing verified travel information, including destination guides, safety protocols, and real-time updates. The platform also incorporates a customizable trip feature and a marketplace for purchasing travel accessories. By combining local insights with user-friendly navigation, Nomad Oasis supports corporate objectives to enhance travel safety, accessibility, and convenience for all users. The application aligns with business strategies to promote tourism in Pakistan and ensure a seamless travel experience for domestic and international visitors.*

## **1.3 Title**

*Nomad Oasis: Redefining Travel in Pakistan*

*Nomad Oasis serves as a digital travel companion, providing immediate solutions to common travel challenges such as lack of reliable information, safety concerns, and inefficient planning. Its goal is to empower users with tools and insights that enhance their journey and enable them to explore the beauty and diversity of Pakistan confidently.*

## **1.4 Objectives**

- *Provide accurate, up-to-date travel information.*
- *Streamline and simplify trip planning.*
- *Ensure travel safety through expert-curated safety protocols.*
- *Offer real-time updates and destination-specific travel advice.*
- *Establish a marketplace for purchasing travel accessories and regional products.*

## **1.5 Problem Statement**

*Tourism in Pakistan faces significant challenges due to the lack of accessible and up-to-date travel information. This creates difficulties for travelers in planning trips, gaining local insights, and ensuring safety. Additionally, tourists often struggle with unverified accommodations and poorly optimized routes, which further hinder their experience.*

Nomad Oasis addresses these issues by offering a unified platform that combines local expertise, travel resources, and safety measures into one application. By providing verified itineraries, real-time travel updates, and a convenient shopping platform for travel essentials, Nomad Oasis makes traveling across Pakistan safer, more enjoyable, and more efficient. The software leverages technology to bridge the gap between travelers and reliable information, promoting tourism and ensuring a stress-free travel experience.

## 2. Overall Description

### 2.1 Product Perspective

< Nomad Oasis is a self-contained travel guide platform designed to assist tourists exploring Pakistan. It provides features for booking hotels, managing travel packages, and accessing personalized support. The system integrates functionalities such as account management, shopping cart operations, booking history, and query management to streamline the user experience.

Key system components include:

- **Traveler Portal:** Enables travelers to manage accounts, book hotels and packages, and submit queries.
- **Admin Interface:** Facilitates the management of hotels, rooms, packages, and system logs.
- **Consultant Support:** Allows consultants to resolve traveler queries.

The system has front end in JavaFX, business logic in java, and backend in MySQL and includes operations for logging user actions, managing bookings, and maintaining a consistent user experience.

.>

### 2.2 Product Functions

< Nomad Oasis offers a wide range of functionalities aimed at enhancing the travel experience for tourists in Pakistan. The core features include **User Management**, where travelers can register, log in, and update their profiles. The **Hotel Booking** functionality allows travelers to search for available rooms, book them, and even cancel reservations if needed. Additionally, **Package Management** enables users to view, book, and cancel travel packages tailored to their preferences. The **Shopping Cart** feature allows travelers to add travel-related items to their cart and complete their purchase seamlessly. For **Querys**, travelers can submit questions or concerns, which consultants can address by providing responses to queries assigned to them. From the **Admin Operations** perspective, administrators have the capability to add, update, or remove hotels, rooms, and travel packages from the system. They can also manage the inventory of items available in the marketplace and monitor system activities by reviewing user logs to ensure smooth and secure operations.>

### 2.3 List of Use Cases

- 1- Sign Up/Login
- 2- Book Hotel Room
- 3- Book Package

- 4- Manage Cart
- 5- Submit Query
- 6- Update Profile
- 7- Respond Queries
- 8- Manage Hotels
- 9- Manage Packages
- 10- Manage Items

## 2.4 Extended Use Cases

USE CASE 1: Hammad Amer

|                                                                                                                                                                                            |                                  |

## 2.5 Use Case Diagram

## 3. Other Nonfunctional Requirements

### 3.1 Performance Requirements

Database queries for booking and package management should not exceed **100 ms** execution time.

The system should recover from crashes and reinitialize all essential services within **10 seconds**.

Response time for hotel/package searches must be less than **2 seconds** under normal network conditions and with a database that can contain up to 10,000 records.

### 3.2 Safety Requirements

The system must ensure data recovery capability within **1 hour** after any failure, including database corruption or server crashes.

Critical components like payment processing must include safeguards to **prevent duplicate transactions** in case of unexpected failures.

Error messages must never expose sensitive information (e.g., SQL query details).

### 3.3 Security Requirements

**Multi-factor authentication (MFA)** is required for admin accounts and sensitive operations like modifying user data or financial records.

A **role-based access control (RBAC)** system must enforce user permissions, ensuring that users, admins, and consultants can only access authorized features.

Regular security audits must be conducted every **6 months**, and identified vulnerabilities must be addressed within **2 weeks**.

### 3.4 Software Quality Attributes

#### Usability:

- The interface must follow established **JavaFX design patterns**, ensuring consistent navigation and interaction.
- The system should support accessibility features like **keyboard navigation** and **screen reader compatibility** for visually impaired users.

#### Scalability:

- The system must be scalable to handle **1,000 concurrent users** and database sizes exceeding **1 million records**.
- Future enhancements should include the ability to integrate **cloud storage** for large data sets.

#### Reliability:

- System uptime must exceed **99.5%**, with automated monitoring and alerts for server downtimes.

#### Maintainability:

- The codebase must use **clean coding standards** (e.g., naming conventions, modular architecture) to ensure easy future development and debugging.

- All system components must include **unit tests**, achieving at least **80% code coverage**.

### 3.5 Business Rules

Only **verified users** (via email or phone number) can make hotel or package bookings.

Admin actions (e.g., adding/removing hotels or packages) require **two-factor authentication (2FA)** to minimize unauthorized changes.

Travelers gets 75% money back when canceling packages.

### 3.6 Operating Environment

#### Supported Platforms:

- **Operating Systems:** Windows (10+), Linux (Ubuntu 18.04+), macOS (10.14+).
- **Hardware:** Minimum 8 GB RAM, Quad-core processor, 20 GB disk space for servers.
- **Browser Compatibility:** Supports all modern browsers (e.g., Chrome, Firefox, Edge) for any web-based admin or consultant portal.

#### Software Dependencies:

- **Java JDK 17+** for the main application.
- **MySQL 8.0+** for the database.

### 3.7 User Interfaces

#### Traveler Portal:

- The user-facing interface will be built using **JavaFX**, providing travellers with intuitive navigation for booking hotels and packages.
- Travelers can explore images and itineraries of popular destinations.
- Logs implementation so traveller can view his app history.

#### Admin Dashboard:

- Editable forms for adding or updating hotels, packages, and marketplace items.

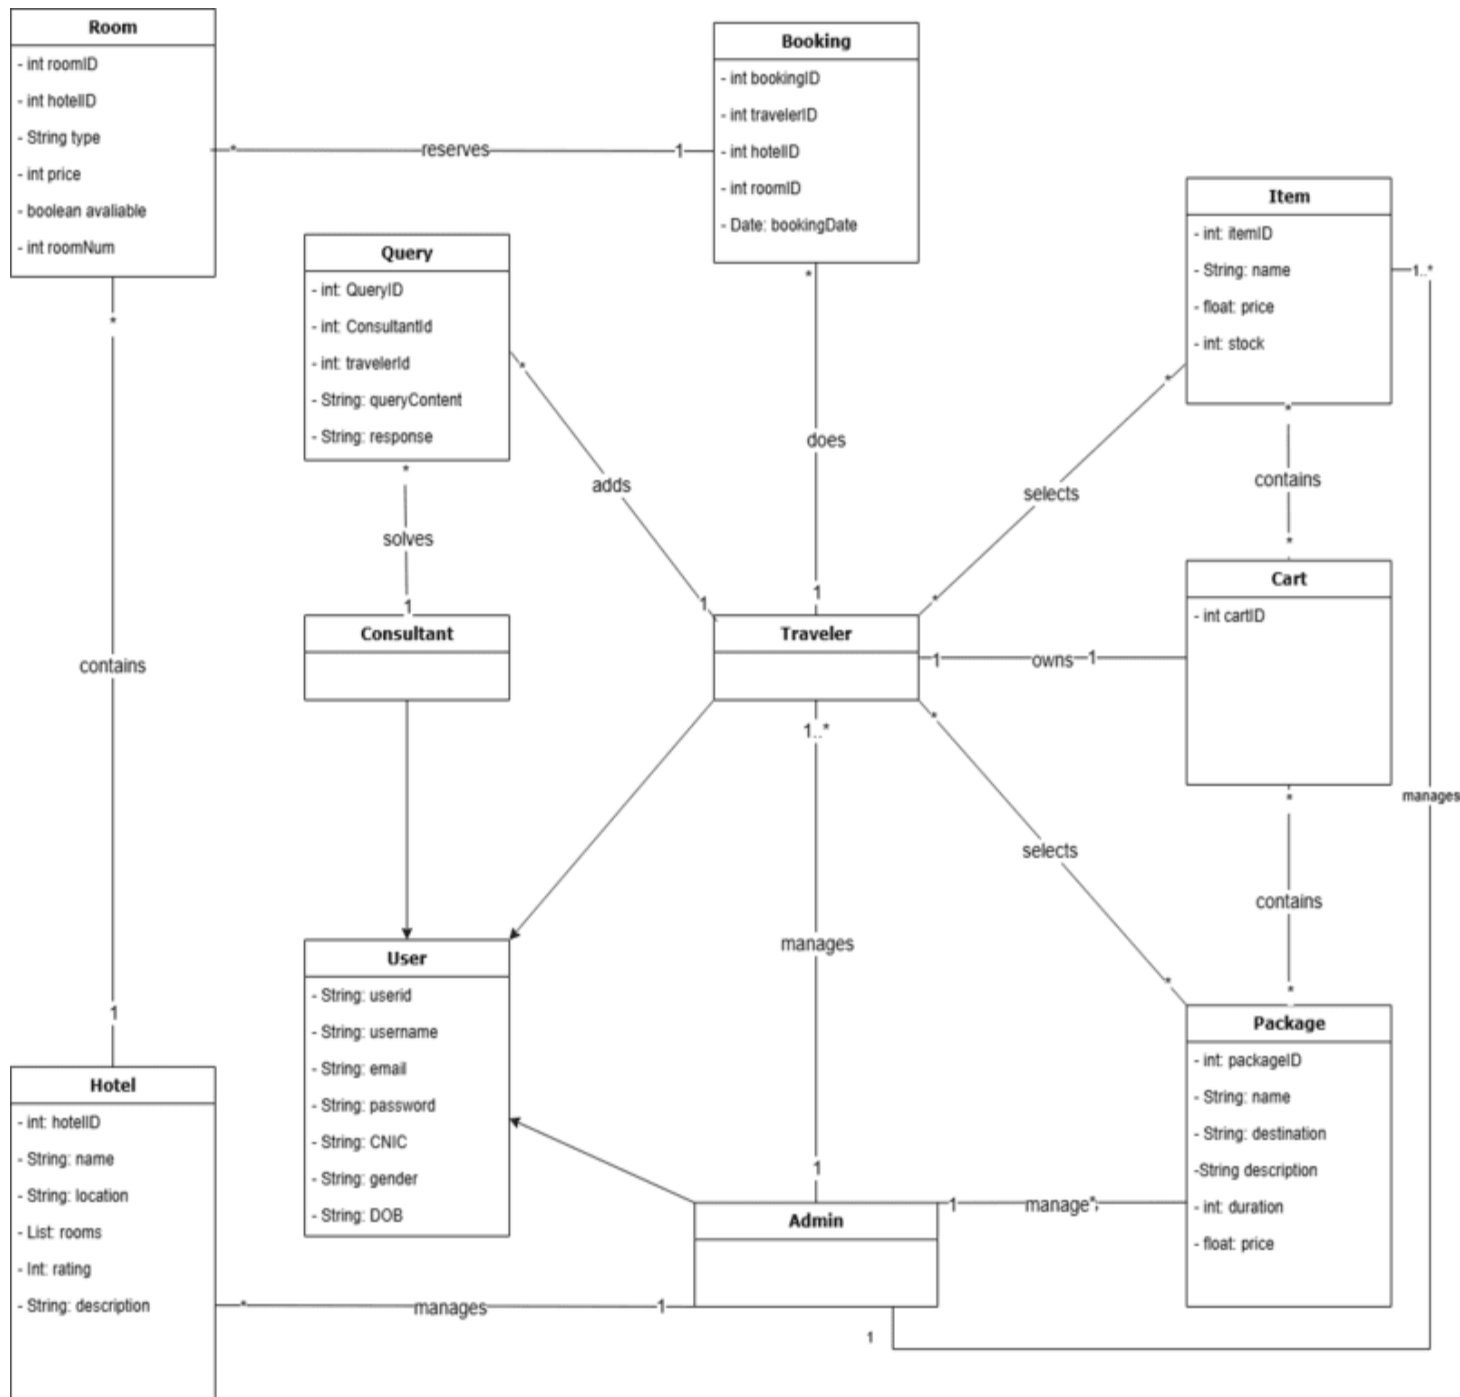

#### Consultant Interface:

- Enables consultants to respond to traveller queries via a simple text area.
- Displays a list of pending queries for resolution.

#### General UI Features:

- **Error Handling:** User-friendly error messages.
- **Responsive Design:** Adapts to screen sizes on both laptops and PCs.
